

# New Gridelements

for Körber Logistics

**Description**

**2**

# Description

New Gridelments should be available for the Körber Logistics Website.

The new functions are to be developed as an extension that can be installed for each of Körber Logistics website seperately.

## **The following functions are required:**

- Single-column, double-column, three-column and four-column grid elements are available
- Switching between different types at a later date.
- Different types of content elements can be inserted into each column. Grid element can contain several types of content elements by the same time. The following types are provided:
  - Image over text in the grid
  - Headline
  - Text module with optional image
  - (standard TYPO3 text/media element)
  - News
  - plain HTML
  - [insert records]
- The mobile behavior is defined for each type and results automatically from the selected number of columns. The following viewports are taken into account:
  - <576 px
  - 577 - 767 px
  - 768 - 991 px
  - 992 - 1199 px
  - >1200 px
- The grid elements adopt column widths and spacing from existing elements. In particular, the content is always flush with other elements on the page.
- Gridelements can be translated with included content elements.
- Other characteristics to be defined
