

# Cloud solutions

Shorten time-to-launch (TTL), simplify IT operations and eliminate the need for up-front investments

**Our cloud solutions let you run your supply chain software – including your warehouse, transport and yard management solutions – from the cloud. This will free your business from the need to manage an on-premises IT infrastructure.**

**On-premises IT infrastructure requires significant IT resources**

Running supply chain applications, in particular your WMS, from your datacenter requires substantial investment and effort by your IT department.

For starters, you need to allocate funds for and purchase dedicated IT infrastructure, with all required hardware and software components. Your IT team then must deploy and test all solutions, which takes significant time and effort.

And once deployed, the team has to maintain the system to ensure its continued operation. In addition, IT security measures are time-consuming and need to be evolved constantly, in order to protect your supply chain systems against vulnerabilities and breaches from the outside.

And then there are compliance requirements, with a growing number of data security and privacy regulations that need to be implemented.

**“Installing and running your software on-premises can be risky, especially if you don’t have the resources to carry out a successful implementation. That’s why so many customers leverage our cloud-hosting experience of more than 10 years and our global team of cloud experts.”**

**Scott Brask**  
Körber

## Key benefits

**Continuous availability**

Our cloud solutions maximize uptime and ensure business continuity in case of system failures and disasters.

**Security and Compliance**

Designed to provide data security and privacy, our cloud platform is ISO and SOC certified, and complies with data privacy regulations, including GDPR.

**Focus on core competencies**

Free up valuable resources so you can focus on improving your supply chain operations.

**OpEx financing model**

Eliminates the need for high, up-front capital expenses, and replaces them with stable, predictable monthly fees.

**TTL**

Get supply chain solutions up and running quickly with minimal provisioning times.

Considering the time and effort required, your IT resources are ultimately better spent supporting your supply chain operations and core business.

## Compliant cloud solutions with built-in protection

Our warehouse, transportation and yard management, as well as Distributed Order Management and Proof of Delivery solutions are all supported on our cloud platform. It provides the full functional scope of each solution, with significant added benefits:

- Your supply chain applications can be deployed with minimal lead times
- You gain much-needed flexibility by freeing up internal resources
- Your data is accessible centrally through the cloud platform, and can be made available to all employees, customers and business partners

The platform is also highly scalable: it evolves with your business needs, and dynamically supports growing and shrinking workloads. In addition, Körber's extensive cloud hosting expertise will ensure a successful, highly performant implementation of your supply chain applications.

Körber's cloud solutions protect your business with comprehensive backup and failover capabilities to ensure that your supply chain solutions will continue to be available in the event of an equipment failure or other disruptions.

## Our cloud solutions in use

### Conn's HomePlus

Conn's has 4,500 employees, 117 retail stores and a growing ecommerce business. The company replaced its homegrown warehouse management system with a cloud-based solution from Körber to ensure visibility and consistency across 167 sites.

### Braas

Germany's leading roof system provider relies on our cloud-based proof of delivery app to deliver goods for 80,000 construction sites per year.

Our datacenters comply with regional standards, as well as with applicable data security and privacy regulations, including GDPR.

## The Körber difference

We have accumulated extensive expertise in operating highly performant supply chain solutions in our global, proven cloud environment. With datacenters on five continents, we can implement advanced supply chain solutions for clients worldwide, and support them with regional cloud hosting capabilities.

**“A significant advantage of the Körber Cloud is that the hosted solutions are platform-independent and can be seamlessly integrated into the existing IT system landscape.”**

**Massimo Acquasanta**

Head of SAP Applications of Braas

## Cloud-first

Körber embraced the cloud for warehouse management solutions before any of our competitors. Analysts predicted that by 2020, 50% of all warehouse management systems sold would be cloud deployments. We were well ahead of this curve in 2018 with 60% of our new systems provisioned in the cloud.
