

ERP integration platform

Bring together all your supply chain systems

Körber's ERP Integration Platform is designed to bring together your end-to-end supply chain solutions. This could include, for example, your warehouse management system, transport management system, financial systems and so forth. These disparate line-of-business (LoB) products may be provided by different vendors, but in the modern warehouse they must be tightly integrated.

Bringing all your systems together is a major challenge

Your organization's supply chain is running various systems – with business processes flowing back and forth between these systems (the order to cash cycle) – and this generates high levels of complexity. To be competitive, you need to extract data from your various LoB applications and bring all that data into one place, so you can apply analytics which will help you to improve efficiencies.

“In today's highly complex business landscape, organizations need to deal with the pressing challenge of integration if they're to remain relevant and competitive.”

Sean Elliott
Körber

Key benefits

Adaptability

The adaptability of our solution is paramount, and we provide more than ten out-of-the-box integrations for a variety of minor business applications. In this respect, we provide a truly bespoke service that is totally unique in this marketplace.

Cost control

Körber provides tools that will enable your organization to integrate your systems and maintain a lower total cost of ownership over the long term. The solutions can be managed and changed on an ongoing basis by your own workforce, as opposed to having to continually rely on Körber. In addition, our solutions can help you to transition from capital to operational expenditure.

Cloud capabilities

Another plus, especially for organizations with outdated infrastructures, is the fact that Körber is a leader when it comes to running warehousing systems in the cloud. So, your organization can easily offload more of your on-premises systems onto the highly cost-efficient cloud version of our software solutions.

Driving innovation

The Internet of Things is a key consideration for the warehousing industry. Your large-scale machinery (for example, robots, trucks, refrigerators and so forth) will benefit from having sensors attached to drive business value. We can help you to integrate all the data produced to gain a deeper understanding of your environment and make better-informed decisions.

A key business driver for an integrated platform is operational efficiencies across the entire supply chain. If you're building a new warehouse facility, for example, you'll need the right integration solution to efficiently run that facility and optimize productivity. Alternatively, your business may be entering a new growth phase, but your current supply chain systems cannot support you as you seek to scale your operations.

Another widespread business challenge is an inability to modernize when your infrastructure has been in place for decades. This is a major obstacle in terms of digital transformation.

Choose a standardized technology platform or integration tools

There are two strands to Körber's ERP Integration Platform software.

First, there's the technological platform itself. Our standardized offering enables warehousing companies to build integrations directly into their infrastructure. This is especially relevant for cost-conscious organizations who are empowered to take ownership of the system.

Workforce retention

According to the US Department of Labor, average warehousing turnover is greater than 40%. In areas of North America with dense warehousing that figure can be greater than 100%. Our solutions are created to reduce complexity, which will enable you to onboard resources more rapidly.

Secondly, we can provide an out-of-the-box set of integration tools, which can be applied to all or any of an organization's LoB applications. This fast route to integration drives a rapid time to value and helps to generate a quicker return on investment. Many of our customers opt for this approach to accelerate project delivery or when they are implementing their next-generation supply chain solution.

The Körber difference

Körber's experts deliver market-leading technology coupled with deep industry experience, to drive predictable and cost-effective value outcomes for supply chain solutions around the world.

“We enable you to control your own integrated supply chain solution, increase efficiencies and dramatically reduce costs across your business with a ‘do it yourself’ approach for the long term.”
