

# SAP EWM

Consulting and implementation

## Greenfield and retrofit – SAP EWM is your best-in class solution

Due to our many years of experience in the market, we can support and advise you in the implementation of SAP solutions in greenfield projects as well as in the impending migration from SAP WM / SAP LES to SAP EWM.

When building new warehouses, companies usually look to future-proof their warehouses with management systems that can control and optimize all processes. The software needs to be integrated with logistics and industry-specific automation hardware to achieve a high-performing operation. We have the experience how to effectively implement your SAP EWM which perfectly matched your needs.

In retrofit projects, the previously used warehouse management system has to be replaced since its software can no longer be updated to match new requirements. Integrating a future-proof WMS with the existing system landscape is a top priority. Körber helps you to optimize your processes and develop a future-proof solution.

## Single Platform approach

Our implementations fully leverage SAP's industry-leading "single platform" approach, resulting in seamlessly integrated, **end-to-end supply chain processes**.

Either for new warehouses or for retrofit projects that already use SAP solutions in other areas, the implementation of SAP EWM is the best and most natural choice. By developing a uniform system landscape in which several SAP modules work easily together, the future viability of maintenance, support and further developments is guaranteed.

**“For our customers running SAP worldwide, it makes perfect sense to integrate all their supply chain processes, both warehouse and transport management, on the SAP platform. As an international company, Körber offers the unmatched advantage of deploying these solutions on a global scale.”**

**Karl Heinz Kern**

CEO Consulting, Körber Business Area Supply Chain,  
Körber

**Over 300 SAP installations in a broad range of industries:**

-  **Chemical and Pharmaceutical**
-  **Automotive**
-  **Fashion**
-  **Logistics Service Providers**
-  **Retail**
-  **Consumer Goods**
-  **Food & Beverage**
-  **Industrial and Manufacturing**

- Multiple long-term customer relationships
- For over 20 years!
- Up to 10 follow-up projects in 10 different locations

## What we can do for you in the SAP landscape

---

### Full Integration

With SAP S/4HANA or SAP ERP and other applications in the SAP Supply Chain Logistics Suite

### Flexible Modelling

Comprehensive modelling of physical layouts and warehouse processes

### Processes Optimization

Design and implementation of the resulting optimized warehouse and supply chain processes

### Reliability & Security

Guaranteed reliability with software ready for highly automated warehouses requirements

### Guaranteed Future Viability

Continuous system development and maintenance, with assured long-term support

### Independence

Full customization and development resources for on-demand system changes

### Cutting-Edge Technology

Modern and flexible user interfaces, such as SAP Fiori and SAPUI5

### Homogenous System Landscape

Connected business processes and use of SAP EWM cloud to reduce initial costs and internal IT efforts

**Körber** is a reliable partner that always delivers the right SAP solution on time. Due to our status as a ramp-up partner of SAP, we test new versions and product improvements before their release and can also implement these at selected customers. Due to this advantage, we – and as a result our customers – are always one step ahead. We are with you along all stages of the project, to make sure that everything runs smoothly, from consulting to implementation. This is also confirmed by our status as SAP PartnerEdge Gold Partner. The recognition is awarded those partners that perform at a high level across their organization and illustrate a strong commitment to deliver business value to SAP's customers. It is based on Körber's many successful customer project implementations, such as HARTING, JYSK, and WDT.
