

# Transportation management system

Industry-leading solutions for logistics companies

**Körber's transportation management system (TMS) is the leading cross-industry solution for logistics companies such as truckload carriers, less-than-load carriers, brokers and 3PLs.**

#### **Challenges across all logistics companies**

In the supply chain transportation space, logistics and trucking organizations face a range of challenges.

Manually using paper, whiteboard and spreadsheet-based systems is inefficient, especially when it comes to data being duplicated or mislaid and lost. This has an adverse effect on vital procedures such as dispatching trucks, communicating with customers and rating, which involves calculating customer charges and payments to freight forwarders or carriers. To ensure these procedures are optimized to be right-first-time, trucking companies must automate their systems.

#### **Key benefits of TMS**

##### **Paperless environment**

Our software will digitize all your data, enabling your organization to become paperless, while automation increases the accuracy and efficiency of your operational processes. This also helps to reduce errors and operating costs.

##### **Shipment visibility**

You'll gain greater transparency of all shipments across the entire supply chain – from your warehouse to the point of delivery. With dramatically improved communications, your staff and your customers know exactly where your shipments are at any given time.

##### **Flexible licensing model**

We provide cloud-based or on-premises versions of our software. We also have an internal team that is dedicated to implementing transportation management systems and providing our customers with ongoing support and consultancy services.

To go completely paperless, transportation organizations must also implement document imaging systems and so forth. At the same time, appropriate consideration must be given to planning capabilities, while ensuring all relevant compliancy regulations and requirements are adhered to.

In today's world of same-day delivery expectations, another key requirement for logistics and trucking companies is to provide shipment visibility for all internal stakeholders, and all customers.

### **Accurately manage shipments with automated systems**

Our highly efficient TMS solution is designed to integrate with your existing warehouse management and ERP systems. This will automate your order processes and effectively consolidate those orders. A single point of data entry eliminates the need for data to be duplicated across different parts of the system. Plus, all data is available in real time to all stakeholders across the business – as soon as it's added.

Our transportation management application will accurately acquire the goods and manage the shipment of your orders, regardless of whether you're using your own fleet or an external carrier's trucks. This means customer charging and payments to your drivers or carriers will always be calculated correctly.

### **TMS in use**

#### **Ferros Puig**

A specialist retailer of steel and iron goods based in Fornells de la Selva, Spain, Ferros Puig adopted Körber's warehouse and trucking software. The company has optimized all warehouse and transportation processes across the board, dramatically increasing the efficiency of operational processes.

The software also factors in compliancy regulations so you can rest assured your organization will adhere to all the necessary requirements.

**As a specialist retailer of steel and iron products, we have high quality standards. To speed up and streamline our processes, we optimized our entire logistics network – from receiving goods to transport management, right through to the last mile.**

**Joaquim Maria Masramon Ordís**

CEO of Ferros Puig

#### **The Körber difference**

With unparalleled industry knowledge and technical expertise, Körber is a market leader in the supply chain transportation space. This is backed by our company's global footprint, our continual investment in research and development, and our commitment to innovation for warehouse management, transportation management, SAP and ERP systems.
