

Robotic solutions by Körber.

Boost efficiency and flexibility with Körber's scalable robotic fulfillment solutions

One single partner – infinite possibilities

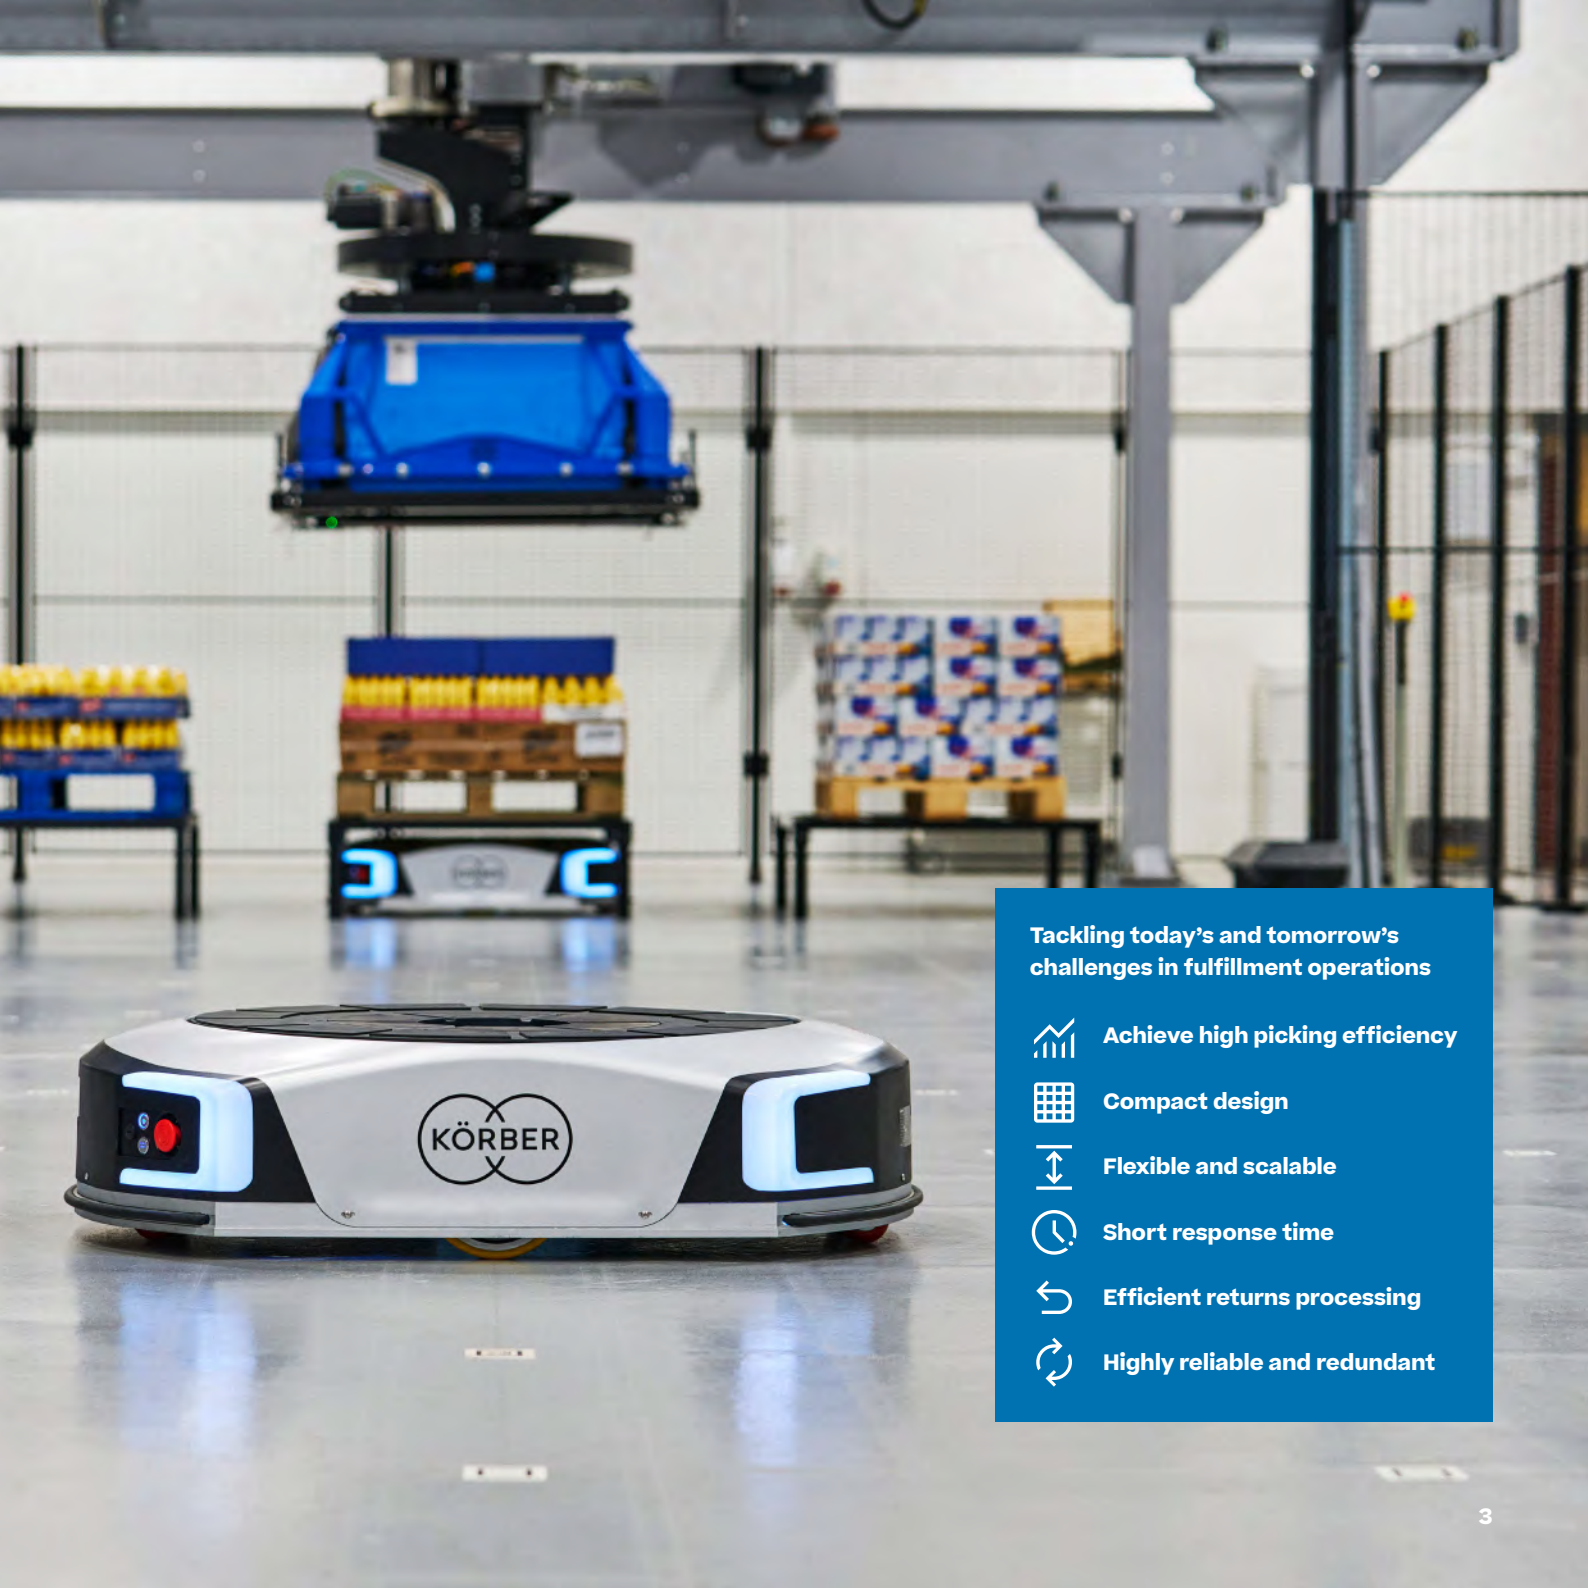

Robotic solutions by Körber

Supply chains face more complex challenges than ever before. If you want to overcome staff shortages, ever-tighter delivery schedules or seasonal peaks, robotics is the key to optimize your fulfillment operations. The quest for the best solution is not only a matter of technology, but of products handled, supply chain requirements, and customer expectations. That's why we don't rely on one single technology. We offer a manufacturer-independent suite of robotic fulfillment systems. Our modular, highly scalable solutions are customized to perfectly fit your current and future needs. With worry-free integration, easy to use applications, and full life cycle services we accompany your journey into automation.

Experience Körber's excellent offering of integrated solutions

- Expert consulting and design teams for tailored solutions
- Innovative solutions for enhanced efficiency
- Worry-free Implementation with our comprehensive support and expertise
- Easy to use solutions for effortless operation
- Complete life cycle management for hassle-free operation

Tackling today's and tomorrow's challenges in fulfillment operations

Achieve high picking efficiency

Compact design

Flexible and scalable

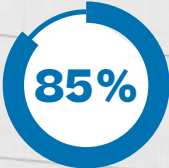

Short response time

Efficient returns processing

Highly reliable and redundant

space
reduction

Attabotics - highest density and throughput combined

A new dimension of fulfillment

The Attabotics system is a truly unique solution for single-item order fulfillment. Highest storage density is combined with excellent performance to overcome your supply chain challenges. Attabotics' robots travel in all 3 dimensions through the innovative, vertical grid structure. Robots have direct access to each bin without the need for reshuffling, making the system's performance independent of your order structure and ABC curve. The solution offers optimal flexibility and scalability. The grid can be expanded easily, if more storage is needed. In case more throughput is required, robots and/or workstations can simply be added. All without significantly disrupting operations. Due to the integrated workstations and sequencing capabilities, the Attabotics solution does not need

conveyors. As an experienced integrator with a complete portfolio, Körber can combine the Attabotics system with mobile robots for an even more scalable solution.

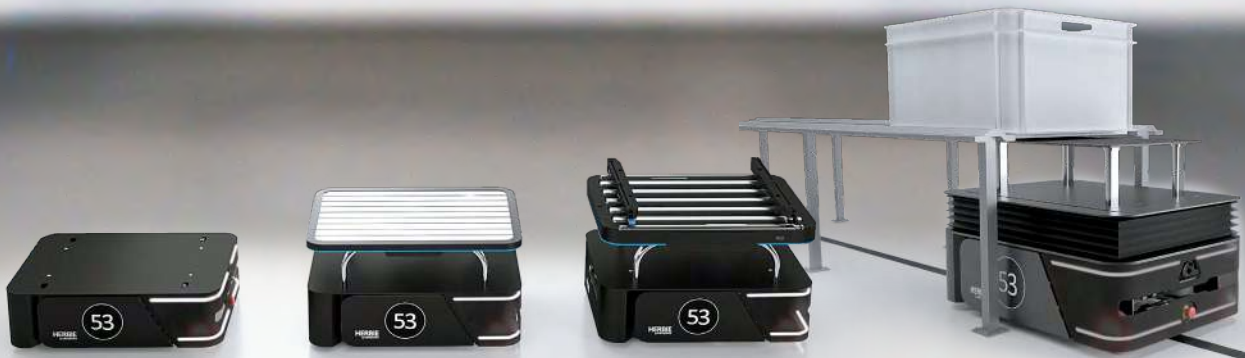

Driving your business with mobile robots

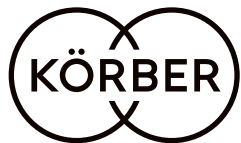

Mobile robots are a flexible, fast, and scalable way of efficiently automating fulfillment processes in your warehouse. Increased space and operational efficiency reduce your reliance on manual labor and cut down costs by storing more goods in less time with greater accuracy. Experience considerable performance increases after short realization time and flexible expansion according to the development of your business.

Unsure which mobile robot technology is the one for your specific needs? No worries, our specialists will develop a customized solution tailored to your exact requirements and cater for the integration with complementing technologies. Körber is your one-stop-shop for mobile robot solutions.
